

TIFUL SKIN READY WITHIN

How SkinPen Works?

Stimulates your body's natural power to increase collagen and elastin, turns to a healthier looking and firmer skin.

Confidence below the confidence above it

Collagen and elastin are the essential protein fibers that give skin its support and elasticity. As we age, these fibers break down and can cause wrinkles.

SkinPen stimulates and activates your own collagen to create more youthful looking skin, smoothing wrinkles on the neck and improving the look of facial scars.

After treatment, you will look more youthful and rejuvenated.

THE SKINPEN DIFFERENCE

-  Rejuvenates from the inside out for younger-looking skin
-  Results are natural**, safe, and effective for all skin tones and types
-  Jump-starts new collagen without heat or chemicals
-  Quick-and-easy with little to no downtime
-  Significantly improves the appearance of wrinkles on the neck*
-  Dramatically improves the appearance of acne scars*

RESULTS YOU'LL LOVE

IN CLINICAL STUDIES,

85%

of patients said they were satisfied with their SkinPen treatment.*

BEAUTIFUL SKIN,
NATURALLY

WHAT YOU CAN EXPECT

SkinPen is a simple, comfortable, and effective treatment for skin rejuvenation. Most people see results in as few as three 30-minute sessions.

What is SkinPen®?

The first FDA-cleared microneedling device, SkinPen is used by aesthetic providers all over the world. Most people see big results in as few as three sessions.

Information from the Out

Wrinkles and natural aging can leave you confident about the way you look.

After SkinPen, you have a simple and effective solution that will bring your true beauty back.

OR
BY NAME.

• Before Treatment

Your provider will gently cleanse your skin. Topical anesthesia may be administered to assure maximum comfort during the treatment.

• During Treatment

SkinPen creates millions of controlled microchannels in the skin. This jump starts the production of collagen and elastin and encourages the release of growth factors that recruit and increase reparative cells. The result is a cascade of healing processes that can continue for months following your treatment.

The SkinPen treatment lasts approximately 30 minutes. Depending on whether an anesthetic is used prior to treatment, your entire treatment session may last up to one hour — still plenty of time to schedule your treatment before work or during your lunch hour. Be sure to speak with your provider before you come to get an accurate estimate, so you know how to plan your visit.

• After Treatment

Your skin may initially appear slightly pink to red, similar to a mild sunburn. This is normal and should subside within 24 to 72 hours.

Some people see rejuvenated skin after just one treatment, and results may continue to improve for three to six months following your last treatment.

Your provider may recommend a series of procedures based on your individual goals. Maintenance of your procedure may require multiple treatments.
